

## Empowering SMBs with Affordable, Fast, and Compliant Privileged Access Management

### Why Choose RankEZ PAMaaS?

Small and medium-sized businesses (SMBs) face unique cybersecurity challenges. At RankEZ, we understand the need for a cost-effective, easy-to-deploy, and regulation-compliant Privileged Access Management (PAM) solution tailored for SMBs. Our cloud-based PAM-as-a-Service (PAMaaS) delivers enterprise-grade security without the complexity or high costs, ensuring your business stays

### Key Benefits

#### Affordable Pricing

Designed for SMB budgets, RankEZ PAMaaS robust security at a fraction of the cost of traditional PAM solutions.

#### Rapid Deployment

Get up and running in hours, not days, with our intuitive setup process and expert support. Less components in your VPC and on-premises data center.

#### Stable VPN-less Access

Securely access critical systems, cloud data without the hassle of VPNs, using zero-trust, just-in-time access controls. Excellent stable network across China Mainland and Hong Kong / Macau / Overseas.

#### Lower Operation Cost

Reduces operational costs by streamlining access control and minimizing the need for in-house infrastructure and maintenance.

#### Quick Regulatory Compliance

Meet G3, SFC License, GDPR, HIPAA, PCI DSS, and other regulatory compliance effortlessly with automated audit trails and reporting.

#### Scalable & Flexible

Grow with confidence as our cloud-based solution adapts to your evolving business needs.

### RankEZ PAMaaS

### RankEZ On-premises PAM

#### Deployment

In hours

In weeks

#### Customer Computing Resource

Minimum 2C+4GB as connector

4C+16GB is at least to host one set PAM

#### Service Component Resource

All the server components are in SaaS, provided by the service provider.

The customer shall provide computing resources for several networks, maybe huge when

#### Upgrade

Transparent and executed by service provider

Need additional professional service by planning

#### DR Drill

SLA is ensured by SaaS

Have to drill each year and ensure resilience and redundancy

#### Security

The same as On-prem

Rich Security protection

#### Flexibility

The same as On-prem

Full integration with enterprise application like Splunk/ES/Tenable/Ansible...

### Comparison between PAMaaS and On-premises PAM

# Function & features

## VPN-less and Secure Web Session

RankeZ provide web-based portals where users (e.g., vendors or admins) can access internal systems (RDP, SSH, web apps) directly through a browser. No need to install VPN clients or expose internal applications to the internet.

## Secure Vendor Access

Allows organizations to provide vendors with just-in-time (JIT) access to specific systems or resources, following the principle of least privilege.

## Workforce Password Management

Each user has a personal workspace to store the individual passwords in a private secure place to ensure safety and privacy. An SSO panel for all enterprise users to connect to all applications.

## Privileged Account Discovery and Inventory

A comprehensive view of privileged accounts across the organization, including those created without IT approval, to gain visibility and ensure safety.

## Password Rotation

It enables organizations to store, rotate, and protect privileged account passwords with one time password policy, ensuring secured passwords, proper access at the right time.

## Enterprise Integration

It is designed to integrate seamlessly with other security technologies, such as vulnerability system like (Tenable/Rapid7) or SIEM (Splunk, ELK), IAM (Okta, Azure AD, etc), and endpoint protection.

## Session Recording and Control

It includes session recording and control for privileged user activities, providing comprehensive control and auditing for command-line, database, file transfer, and clipboard activities.

## Automated Workflows

It includes automated workflows for access requests, approvals, and revocations which streamlines the process, reduces IT's burden, and ensures that all access requests are handled consistently and efficiently.

## Reporting and Analytics

It supports tracking and analysis for privileged user activities, access attempts, and configurations changes, which helps organizations identify and respond to potential security incidents in time.

## Get started Today

Protect your business with a PAM solution that's affordable, fast, and compliant. RankeZ PAMaaS empowers SMBs to safeguard critical assets without complexity or high costs. Contact us for a free demo and see how we can transform your cybersecurity strategy.
